

SYSPRO ShopClock

Objective

SYSPRO ShopClock captures employee time on job / operations quickly and accurately in real-time using scanning technology. Track employee time and attendance with flexible setup options by configuring shift rules to match your shop floor labor policies.

The Value of SYSPRO ShopClock

- Capture labor on job / operations in 'real-time' and provide excellent production status 'visibility'
- Automate the posting of labor transactions to SYSPRO 'Work In Progress' (WIP) in either traditional batch mode or instant labor posting
- On-screen GANTT Chart provides up-to-latest second management "view" of shop floor labor activities
- GANTT Chart horizontal "bars" are color-coded to clearly show which operations are complete, partially finished, over-budget, or non-productive time
- Assign non-productive reason codes / descriptions in SYSPRO and capture as it happens on the shop floor
- Log non-productive time against jobs / operations and post to GL expense accounts immediately
- All time 'clocking' is instantly verified against the SYSPRO database to ensure validity
- Clocking 'on/off' is fast and dependable with prompts to guide the employee plus immediate warning message and audible buzz if employee makes a mistake
- Shifts can be defined for any number of days in advance including pre-defined labor rates for regular and overtime pay
- Optional 'Material Kit Issues' can be performed directly from the shop floor
- Use PC's with scanners attached or Computer Wise™ terminals to best suit your environment.

Matching SYSPRO ShopClock to your business

- Customize your time clocking data entry prompts so employees only get asked relevant questions
- Use SYSPRO ShopClock as a labor data collection system for job costing & tracking, or as a time & attendance solution, or both
- On-screen shop floor 'management views' can be quickly and easily filtered by supervisor or area of plant / employee / job / work center / operation and non-productive codes for focused visibility
- Tailor your 'shift rules' to automate arrival / departure lenience rules, coffee / meal breaks, labor rates, etc.

Audit Trails and Reporting

- Supervisors can 'edit' time transactions with security password authorization. Importantly this generates a detailed before / after audit 'log' of any such changes
- Start of shift "Who's Here" report
- Print 'Employee Time Transaction Report' on demand
- XML / ASCII Export of time transactions is ideal for your 'payroll interface' program.

Integration

- Includes embedded SYSPRO e.net solutions 'runtime' license
- SYSPRO Work In Progress (WIP) module
- SYSPRO Inventory module when using optional 'Material Kit Issues' functionality.
